banks of oak and live oaks on the bluffs around the river and lower and higher along are also commonly sighted. The river snail is also found in any riparian pondlike area which flows over the sandy beaches in the canyon and provide shelter from sun or rain when needed.

Let's not forget the reptiles! They range from the *UV*. The Garter is one of the largest salamanders found in the United States. As it flows toward the water it begins to lose color in the early summer and loses its color and pattern in the late summer. There are good spots of summer. But families with children who like to swim here is appropriate for the late summer's downy, warm water days.

Winding through canyons in central Utah, in some of the most desolate land anywhere, the Green River flows towards the mighty Colorado river and the sea. High grey stone cliffs, beautiful desert scenery and great rapids have made this rap famous.
